

# Dendi Permadi

Ts. Dendi Permadi is currently a lecturer and programme coordinator for Bachelor of Multimedia (Hons) Virtual Reality at the Faculty of Creative Multimedia, Multimedia University (MMU), Cyberjaya Malaysia, and a certified Professional Technologist (awarded by the Malaysian Board of Technologists – MBOT). He attended postgraduate course at Inje University, Gimhae, South Korea, and visiting researcher staff at Politecnico di Torino Italy under Erasmus+. Prior to his appointment in education, he embarked on a career in the industry as front end web and game developer. His work interests are in the fields of immersive media, metaverse, game design and user experience.

## Artwork: PERAK MAN

*Medium: After effects, pc, Resolume, projector*

In Perak Man, Dendi Permadi utilizes the cutting-edge medium of projection mapping to transcend traditional art forms and bring the ancient into the present. This work is a digital exploration of Malaysia's archaeological heritage, focusing on significant locations such as Lenggong Valley, Langkawi, Bukit Tengkorak, and Gua Niah. The project employs spatial augmented reality (SAR) to create immersive visual experiences, transforming physical spaces into portals for historical narratives.

Dendi's approach is rooted in his expertise in immersive media and metaverse technologies. By blending educational storytelling with advanced digital projection, Perak Man serves as a vehicle for reanimating the deep past, making heritage sites accessible in new ways. The interactive nature of projection mapping allows the audience to witness the interplay of light, form, and history, as phantasms of the archaeological landscape materialize in the gallery space.

This immersive art experience invites reflection on how technology can be harnessed to preserve and communicate historical knowledge. It is a dialogue between ancient human presence and contemporary digital interventions, where technology becomes a tool for remembering and recontextualizing history within the Anthropocene. In Perak Man, the boundaries between the real and the virtual blur, asking us to reconsider our relationship to time, space, and the heritage that shapes our cultural memory.
