

Immersive Incision and Drainage Procedure VR with AI Trainer

Ts. Dendi Permadi, Cheong Soon Nyeon, Nadia Lim Xin-Ru, Emily Low Hui Li, Thang Wei Jie
Faculty of Creative Multimedia, Multimedia University

VR-AI Trainer bolster clinical confidence and procedural competency among medical students.

CHALLENGES

- Medical students often lack sufficient hands-on experience, example procedures such as Incision & Drainage (I&D).
- High risks associated with practicing on real patients and the significant cost of medical equipment link to lesser practical training opportunities.
- I&D cases appear often in clinical settings, further needing practical training.
- During clinical postings, students primarily observe or assist, leading to reduced procedural confidence and preparedness.

APPLICATION DESIGN

NOVELTY & INVENTIVENESS

APPLICABILITY & IMPACT

CURRICULUM ALIGNMENT

Aligns with the core curriculum for minor surgical procedures in Years 3-5 medical students.

HANDS-ON LEARNING

Fills a key gap in undergraduate training by enabling safe, hands-on practice.

REMOTE ACCESSIBILITY

Support remote learning, increasing access for resource limited solution.

ACHIEVEMENT

➤ InventX Gold Medal Award 2025

COMMERCIAL POTENTIAL

- Offers subscription-based licensing options for medical schools, including per-head or site-wide license. Can operates on standalone VR headsets.
- SDG 3: Good Health and Well-being and SDG 4: Quality Education.
- Copyrighted, CVN No: LY2026W03142

TECHNOLOGY READNIESS LEVEL

- The deployment package installation at the partner university (IMU) for evaluation purposes.
- The usability of the simulation was evaluate using the System Usability Scale (SUS) with 30 participants.
- Meta Quest VR application (TRL 4).
